

Preventing air leakage in an underfloor air distribution system is one of the most important aspects of ensuring the successful operation of the system. Tate's new AirArrest brush style grommets for plenum walls virtually eliminate leaks. The AirArrest grommets save significant time and money over traditional methods of sealing such as caulk, spray foam or packing. The design allows for the addition and removal of wires and cables without the worry of resealing or adding new poke-through holes to meet future growth or changes in technology. Therefore installing Tate's AirArrest reduces the potential for air leakage after initial construction and throughout the life of a building.

Use Tate's AirArrest at power and communication closets or anywhere cables and wires need to be passed through plenum walls.

To receive more information on Tate's AirArrest underfloor sealing solutions, please contact Tate's Technical Hotline at **800-231-7788** or visit us online at: www.tateaccessfloors.com/underfloor_service_devices.

Tate's Through-Wall AirArrest:

- Eliminate the need to use caulk, spray foam, or packing to seal wall penetrations at service closets and other distribution points.
- Is effective with any number of wires and cables or left empty
- Can easily be added to meet future needs
- Is available in 4" & 6" round or 6"x14" rectangular sizes
- Installs quickly saving time and ensuring a tight seal

Through-wall power distribution using caulk to seal around wires.

AirArrest™ saves time and mess associated with sealing through-wall penetrations.
