Subject

REDSTONE FEDERAL CREDIT UNION

Redstone Federal Credit Union is a combination of everything a building can be: The distribution of critical services under an accessible and flexible access floor versus overhead. These building services include HVAC, electrical power distribution, voice and data cabling, and other utilities. It will adapt easily to business change and provide a comfortable environment for their employees. Because Redstone was willing to work with their project team to create a facility that will serve them efficiently for years to come, this credit union is a show piece for sustainable, high performance buildings.

Tate is a leader in providing underfloor service solutions that are cost effective while improving indoor air quality, personal comfort, and lowering energy consumption. Tate's underfloor service distribution system is integral to the design of the Redstone Federal Credit Union, creating a flexible and productive office environment. Promoting underfloor modular power and communications/data networking solutions through structured plug-and-play systems and providing Best Practice Design & benchmarking tools for creating lower cost building construction, Tate offers sustainable building products and methods for any facility.
